

## STM32Cube MCU Package for STM32L4 Series and STM32L4+ Series with HAL, low-layer drivers and dedicated middleware

Data brief

### Features

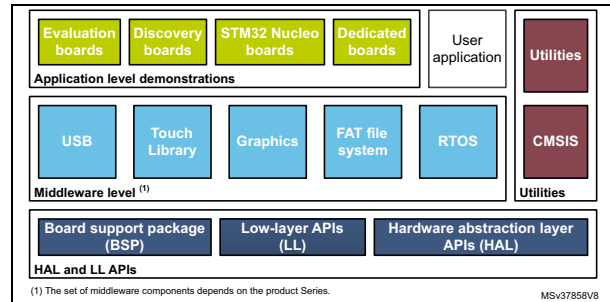

- Consistent and complete embedded software offer that frees the user from dependency issues
- Maximized portability between all STM32 Series supported by STM32Cube
- More than 100 examples for easy understanding
- High quality HAL and low-layer API drivers using CodeSonar<sup>®</sup> static analysis tool
- STM32L4 and STM32L4+ dedicated middleware including USB Host and Device, FAT file system, HAL and low-layer drivers, RTOS, Graphics and touch sensing library
- Free user-friendly license terms
- Update mechanism that can be enabled by the user to be notified of new releases

### Description

STM32Cube™ is an STMicroelectronics original initiative to make developers' lives easier by reducing development effort, time and cost. STM32Cube is the implementation of STM32Cube that covers the whole STM32 portfolio.

STM32Cube includes STM32CubeMX, a graphical software configuration tool that allows the generation of C initialization code using graphical wizards.

It also comprises the STM32CubeL4 MCU Package composed of the STM32Cube hardware abstraction layer (HAL) and the low-layer (LL) APIs, plus a consistent set of middleware components (RTOS, USB, FAT file system, Graphics and STM32 touch sensing). All embedded software utilities are delivered with a full set of examples running on STMicroelectronics boards.

The STM32Cube HAL is an STM32 embedded software layer that ensures maximized portability across the STM32 portfolio, while the LL APIs make up a fast, light-weight, expert-oriented layer which is closer to the hardware than the HAL. HAL and LL APIs can be used simultaneously with a few restrictions.

Both the HAL and LL APIs are production-ready and have been developed in compliance with MISRA C<sup>®</sup>:2004 guidelines with some documented exceptions (reports available on demand) and ISO/TS 16949. Furthermore, ST-specific validation processes add a deeper-level qualification.

STM32CubeL4 gathers in one single package all the generic embedded software components required to develop an application on STM32L4 or STM32L4+ microcontrollers. Following STM32Cube initiative, this set of components is highly portable, not only within STM32L4 Series and STM32L4+ Series but also to other STM32 Series. In addition, the low-layer APIs provide an alternative, high-performance, low-footprint solution to the STM32CubeL4 HAL at the cost of portability and simplicity.

HAL and LL APIs are available under open-source BSD license for user convenience.

## STM32CubeL4 MCU Package

The STM32CubeL4 MCU Package runs on STM32 32-bit microcontrollers based on the Arm® Cortex®-M processor.

The package contains a set of middleware components with the corresponding examples. They are delivered in very permissive license terms:

- CMSIS-RTOS implementation with FreeRTOS™ open source solution
- FAT file system based on open source FatFS solution
- STMTouch™ touch sensing solution
- STemWin, a professional graphical stack solution available in binary format and based on our partner solution SEGGER emWin
- USB Host and Device stack supporting many classes

A set of application projects implementing all these middleware components is also provided in the STM32CubeL4 MCU Package.

## Ordering Information

STM32CubeL4 is available for free download from <http://www.st.com/stm32cubefw>.

## Revision history

**Table 1. Document revision history**

Date	Revision	Changes
30-Jun-2015	1	Initial version.
14-Sep-2015	2	Added Low Layer API description.
30-Oct-2017	3	Updated schematics, <i>Features</i> , <i>Description</i> and package introducing STM32L4+ Series.
1-Dec-2017	4	Updated title and schematic. Updated <i>Features</i> , <i>Description</i> and <i>STM32CubeL4 MCU Package</i> to introduce the 'STM32CubeL4 MCU Package' denomination.

**IMPORTANT NOTICE – PLEASE READ CAREFULLY**

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.
